1 Abstract

2	The invention comprises a secure method and apparatus for the
3	distribution, processing, decryption, and display of combinations of encrypted
4	audio, video, raster graphic still images, vector graphic images, HTML,
5	hyperlinks, textual information, synchronization information, and password and
6	date expiration data combined and encrypted in singular multimedia presentation
7	transmission and distribution files, all of which are represented by binary data
8	files. The invention may be adapted for use with any of the various audio, video,
9	raster graphic still images, vector graphic images, and text data formats and files
10	that represent such information. A specific embodiment of the invention adapted
11	for use on a personal computer and such CPU equipped devices is presented.
